

Eligible Locations: Requirements around use of Eligible Broadband Serviceable Locations (BSLs) for projects are addressed in the CAB Program Guidance, the Scope of Work and the data template required for submission of mapping locations. In the event that the number of locations in the mapping data differs from the number of locations listed in the BSLs, the mapping data will supersede the other data sources. Location data is analyzed by NCDIT to remove ineligible locations such as served locations, locations protected by other grant awards, locations with a significant difference in the number of locations submitted versus the approved eligible locations, and a project is selected for award. NCDIT may choose to negotiate with the respondent on the number of locations to be awarded. The average cost per location may also be impacted in these instances.

Unreserved locations for American Rescue Plan Act (ARPA) funded programs in NC are defined as locations that are not currently served by any of the following: Fiber, Cable, or non-mobile Licensed Fixed Wireless technologies, at least 25mb/s Download and 3mb/s Upload speeds. Unreserved locations are defined as locations that are not currently served by any of the following: Fiber, Cable, or non-mobile Licensed Fixed Wireless technologies, at least 100mb/s Download and 20mb/s Upload speeds, but greater than 25mb/s Download and 3mb/s Upload speeds.
